PROFESSIONAL SUMMARY

Final-year Computer Science and Engineering student with hands-on work in full-stack web apps, AWS cloud, SAP ABAP and data analytics. I like building web applications and Power BI dashboards, and I use SQL and data modeling to make messy data easy to understand. I have completed the SketchBrains AnalytIQ Data Analytics Program and the SAP Code Unnati Program in Emerging Technologies, and I am looking to grow as a developer by working on real business problems.

TECHNICAL SKILLS

- **Data Analytics and BI:** Power BI, Advanced Excel (dynamic dashboards, pivot tables), SQL (MySQL, MongoDB), Python, Data Cleaning, Data Modeling
- **Cloud and SAP:** AWS Cloud Computing, SAP ABAP (BTP development)
- **Full-Stack and Web:** Python (FastAPI), React.js, Node.js, Express.js, JavaScript, MERN Stack, HTML5, CSS3, REST APIs
- **AI and Generative AI:** LLM APIs (Groq), Speech-to-Text, Real-Time Translation, AI Summarization
- **Tools and Platforms:** Git, GitHub, Vercel, Render, MongoDB Atlas

WORK EXPERIENCE

API Web Developer Intern | JP IT Staffing LLC | Sept 2026 – Present

- Develop, integrate, maintain and document RESTful APIs, with a focus on security, performance and coding standards.
- Work with cross-functional development teams, manage databases, write clean code and debug issues to meet project milestones.

PROJECTS

EduAccess | GitHub | Live Demo

Technologies: Python, FastAPI, WebSockets, WebRTC, PostgreSQL, Groq API, Render

- Built an inclusive, real-time smart classroom platform with live multilingual speech-to-text, caption translation across 3 languages and automated AI lecture summaries.

Restaurant Reservation System | GitHub | Live Demo

Technologies: React.js, Node.js, Express.js, MongoDB, JWT, Razorpay, Vercel, Render

- Developed a MERN-based reservation platform with secure login, online booking and a responsive interface, which cut booking time by 60%.

MediScan Diagnostics – Patient Flow and Capacity Analysis (Case Study) | GitHub | Report

Technologies: SQL, Advanced Excel, Data Cleaning, Data Modeling, Business Analytics

- Cleaned and standardized 80,000 appointment records (mismatched center names, mixed date formats) and analyzed wait times, utilization and no-show patterns.
- Found flagship hubs running at 89% utilization against 6% at 27 clinics, and recommended re-routing 30% of corporate checkups, which would cut flagship volume by 22.2%.
- Proposed a 10-minute slot-release policy to recover about 1,514 hours of capacity and presented the findings in an executive deck.

EDUCATION

B.Tech, Computer Science and Engineering – Kommuri Pratap Reddy Institute of Technology (KPRIT), Hyderabad | 4th Year (Current)

Diploma in Engineering – State Board of Technical Education and Training | 2021 – 2024 | First Class

CERTIFICATIONS AND TRAINING

- **AnalytIQ Data Analytics Program, SketchBrains:** Power BI visualization, Advanced Excel, SQL, Data Modeling
- **Code Unnati Program, SAP (CSR Initiative):** SAP ABAP on BTP, AI and Machine Learning, Edge Computing, SAP Analytics Cloud (Cert ID: CU26_35422)

ACHIEVEMENTS

- **Semi-Finalist, Capgemini Tech4Positive Futures Challenge:** Pitched and demonstrated EduAccess, an AI-driven inclusive classroom platform, judged on social impact and technical scalability.
- **Participant, Smart India Hackathon (SIH) 2025 and 2026:** Worked in a team on a technology solution for real-world governance and accessibility challenges.
